SUMMARY

Highly skilled Data Scientist with 2.9 years of hands-on experience in developing and deploying machine learning and NLP solutions. Key contributor in multiple projects, driving end-to-end development of use cases such as telecom churn prediction, retrieval-augmented generation (RAG), ensemble RAG models, and large language model (LLM)-based sentiment analysis, summarization, and topic extraction. Experienced in building domain-aware, multilingual text-to-text translators and performing complex data preprocessing and cleanup. Adept at collaborating with cross-functional teams to deliver impactful and scalable data-driven solutions.

PROFESSIONAL EXPERIENCE

Data Scientist
Happiest Minds Technologies
Aug 2022 – Present | Bengaluru, Karnataka

- Designing and deploying predictive models to identify high-risk customers, enabling improved customer retention strategies.
- Building end-to-end web applications using Streamlit integrated with APIs and LLMs for real-time summarization of news content.
- Implementing ensemble Retrieval-Augmented Generation (RAG) systems using models like LLaMA, Mistral, gemma, Tiny LLaMA and so on, to enhance response accuracy across multiple NLP tasks.
- Leading the development of NLP solutions for sentiment analysis, topic extraction, summarization, and named entity recognition (NER) using both traditional and LLM-based methods.
- Developing multilingual, domain-aware translation pipelines to convert English articles into regional languages, maintaining context and linguistic coherence.
- Executing complex data cleanup initiatives for enterprise clients, leveraging ETL pipelines and SQL-based validation to resolve data inconsistencies across systems.
- Collaborating with cross-functional teams to define requirements, validate outcomes, and deliver robust, scalable ML solutions aligned with business objectives.
- Performing API integrations and automating content generation workflows to support decision-making in use cases like fantasy sports and customer insights.
- Driving improvements in model accuracy and output relevance through performance-based ensemble logic and prompt-specific evaluations.

SKILLS

- **Machine Learning & Data Science**
  Predictive Modeling · Churn Analysis · Ensemble Modeling · Retrieval-Augmented Generation (RAG) · Model Evaluation · Sentiment Analysis · Topic Extraction · Named Entity Recognition (NER) · Text Summarization
- **Natural Language Processing (NLP)**
  Language Models (LMs): LLaMA2, LLaMA3, Mistral, Tiny LLaMA, gemma, phi2 · Multilingual NLP · Context-Aware Translation · Text Preprocessing · Information Extraction
- **Programming & Tools**
  Python · Streamlit · SQL · REST APIs · ETL Pipelines
- **Libraries & Frameworks**
  Scikit-learn · Pandas · NumPy · Hugging Face Transformers
- **Workflow & Collaboration**
  Agile Development · Cross-functional Team Collaboration · Requirement Analysis · Independent Project Execution

EDUCATION

BE – CSE
Vidyavardhaka college of Engineering
8.27 CGPA

AWARDS AND RECOGNITIONS

- Collaboration Award, Q3 FY23 Awarded for outstanding team collaboration and achievement.
- Team Excellence Award, Q3 FY24 Awarded for outstanding team collaboration and achievement.
- Team Excellence Award, Q3 FY25 Awarded for outstanding team collaboration and achievement.
